

HYPAR STRUCTURES

STYLISH, HEAVY DUTY,

The word "HYPAR" comes from the technical name of a saddle shaped sail which is "Hyperbolic Parabola" – curvature in two directions.

The simplest of all tension fabric structures, diagonally opposite high and low points combine to give a twisted 3D form resulting in excellent retention of shape and water runoff.

Shade to Order manufactures Hypars in many different sizes and variations. Centre Column, two column, cantilevered, joined and 4 column (free form) are just some of the variations.

Shade to Orders structures are an investment that will repay the customer with years and years of trouble free service. Fully warranted for up to 20 years with a design life of over 25 years. Optional heating and lights available.

Custom sizes and configurations are available on request.
